*“Хорошая типографика
начинается с внимания
к мелочам, что и отличает
посредственный дизайн
от по-настоящему хорошего.”*

— [Mark Bowley](#)

Типографика —
это нечто большее,
чем *выбор шрифта*.

Задача типографики:
сделать текст
удобочитаемым
и различным.

Длина строки
“measure”

Количество символов в строке (CPL)

Measure (or sometimes "The Measure") in typography is the length of a line of text. For a single-column design measure should ideally lie between 40 & 80 characters.

Many typographers consider the perfect measure to be 65 characters. If the lines are too short then the text becomes disjointed, if they are too long the content

Висячая строка

Rag,
widow,
orphan

Widow

Rag

is the uneven edge of text that is aligned on only one side. In English, most text is left aligned and so the rag is on the right side of the text block.

Text that is fully justified has no rag (some people say that the rag is completely even or straight, rather than not there), and centered text has rag on both the right and the left.

Orphan

Rag

MISCELLANEOUS VALUABLE RECEIPTS.

No. 1.

Doctor Stoy's Cure for the Bite of a Mad Dog.

TAKE 1 ounce of red chicken-weed, (gathered and dried in the shade during the month of June,) put it into 1 quart of strong (or brewers') beer, boil it down to 1 pint. Strain the tea through a clean linen cloth, then stir into the tea 1 ounce theriac so that it will be well mixed. The theriac is not to be boiled.

Dose.—For a man with a strong constitution, one half-pint taken in the morning, sober, and the next morning the other half-pint, also sober.

The patient ought to fast three hours after he has taken the medicine; then he can eat bread and butter, or bread and molasses, for at least a week or ten days; he must not eat any pork, nor any fish or water-fowls, and must not drink any water. He can drink any kind of tea, and he must not get angry or overheat himself for two weeks.

For a person of a weak constitution, make 3 doses out of the above-prepared quantity, and also for children in proportion. 3 doses will be sufficient for a cure.

For animals, the medicine must be doubled; and

Constructing the Grid

22nd Apr 2007

Books and Periodicals

I've come across [Penguin by Designers*](#) on a few sites now, and the cover intrigues me. I was discussing the grid used on *Pelican Originals* the other day, after seeing [this post](#). I had thought that both sets of books used a fairly conventional grid, but assuming this cover is accurate, then the real one is more interesting.

I was looking at it, trying to work out how it's built. I doubted that any part of it was *entirely* arbitrary so I've redrawn it, but having each line only drawn in an obvious relation to something that already exists. What results is a pretty much perfect copy of the existing grid, so unless I was just lucky, I guess this is how they made their grid. These are the gridlines - each one is illustrated in blue as it is introduced:

The same guy who built the

Thesis Framework

You entered a width of **960px** and a CPL of **80**. I've used these values to prepare some typographical recommendations for you:

1. [Optimized Typography for 80 CPL in a 960px-wide Setting](#)
2. [Best Typography for a 960px-wide Setting](#)
3. [Second-best Typography for a 960px-wide Setting](#)

NEW! Click on the Font Size in any typographical recommendation to see the golden scale for that font size.

Optimized Typography for 80 CPL in a 960px-wide Setting

Font Size: **27** | Line Height: **40** | Content Width: **960** | Approx. CPL: **80** | Font:

Georgia

Most designers set their type arbitrarily, either by pulling values out by adhering to a baseline grid. The former case isn't worth discussing the latter requires a closer look.

When using a baseline grid, the first thing you must decide on is your grid unit. You'll commonly see baseline grid values of something like where does a value like that come from?

Typography

Crystal Theme is built with a purpose to deliver a better reading experience. It utilizes em-based typography that rely on different number of characters per line (CPL) for different viewport sizes. It is the most important parameter for responsive typography in our fast-changing multi-device world.

- **~35** CPL — up to 320px
- **~43** CPL — 321-767px wide
- **~60** CPL — 768-990px wide
- **~65** CPL — 991-1200px wide
- **~85** CPL — 1201px and wider
